Career Objective

Backend-focused Software Engineer seeking a Junior Backend Developer role to apply hands-on experience in MERN, Next.js, and REST API development. Aiming to grow into a role building scalable, secure server-side systems while contributing to real-world products in a collaborative engineering team. Long-term goal is to specialize in distributed backend architecture and system design.

Skills

- **Languages:** Python, JavaScript, TypeScript, C, C++
- **Frameworks & Libraries:** Express.js, React, Next.js, Django, Node.js
- **Databases & ORM:** PostgreSQL, MySQL, MongoDB, Prisma
- **Auth & Security:** JWT, Role-Based Access Control (RBAC)
- **Web Technologies:** REST APIs, JSON, HTML, CSS
- **Tools & Platforms:** Git, GitHub, Postman, VS Code
- **Interpersonal Skills:** Problem-Solving, Communication, Teamwork, Time Management, Adaptability

Projects

FixItNow — Home Services Marketplace API

[Live Link](#)

GitHub (Client): [FixItNow-Client](#) *GitHub (Server):* [FixItNow-Backend](#)

- Full-stack home-services marketplace connecting customers, technicians, and admins through role-based booking, scheduling, and payment workflows.
- Role-based booking and scheduling system supporting three distinct user types (customer, technician, admin)
- Secure end-to-end payment processing via Stripe Checkout and webhook integration
- JWT-based authentication with fine-grained Role-Based Access Control (RBAC)
- RESTful API built with Node.js, Express, and TypeScript, backed by PostgreSQL and Prisma ORM

Disaster Relief Platform — Emergency Coordination System

GitHub (Client): [disaster-platform-client](#) *GitHub (Server):* [disaster-platform](#)

- MERN-stack relief coordination platform connecting victims, volunteers, and aid organizations through real-time, role-based dashboards.
- Real-time request tracking and status updates across victim, volunteer, and organization roles
- Request-routing system that links victims to nearby available responders
- Role-based dashboards and access control for three distinct user types
- React front-end powered by a Node.js/Express REST API backed by MongoDB

Dev-Pulse — Developer Productivity Tracker

[Live Link](#)

GitHub (Server): [Dev-Pulse](#)

- TypeScript-based productivity tracker that surfaces developer workflow insights and daily activity trends.
- Automated tracking of focus time and context-switching without manual activity logging
- Visual dashboard summarizing daily and weekly development activity trends

Education

B.Sc in Computer Science and Engineering

Graduated

BRAC University

Thesis: A Security Evaluation Framework for Distributed Retrieval-Augmented Generation Systems

Languages

Bengali (Native) | English (Professional Working Proficiency)
